

# 1-minute Preceptor Plus: Microskills & Feedback Guide

## Get a Commitment

- What do you think is going on?

## Probe for Evidence

- What supports or contradicts your ideas? What else do we need to know?
- Are we making any assumptions? Are these legitimate to make under these circumstances? Why/Why not?

## Teach General Rule

- Elicit from students the pertinent concepts & ask them to explain how the medical knowledge or scientific/clinical concepts apply to this patient.
- Confirm/Supplement understanding of general rule, as needed

## Reinforce What was Right

- e.g., You demonstrated good understanding of patient's situation and recalled well the principles that apply

## Reflect & Correct

- Give constructive, timely, explicit feedback that invites self-assessment and offers concrete guidance for improvement
